USPOULTRY Offers Webinar on Updated Toxic Release Inventory Reporting Tool

TUCKER, Ga. – Mar. 2, 2017 – The Environmental Protection Agency’s Toxic Release Inventory (TRI) Program tracks the management of certain chemicals that have the ability to threaten the environment and human health. The TRI Program was created to provide the public with information on the release of hazardous substances as well as provide first response personnel with information to promote emergency planning and support response efforts. The Program requires various industry sectors to submit annual reports that quantify how much of each chemical is released to the environment and/or managed through recycling or treatment.

USPOULTRY has recently updated a tool to assist poultry and egg industry personnel with calculating release quantities of various hazardous substances from poultry processing facilities and indicate whether the threshold for Toxic Release Inventory reporting was exceeded.

A WebEx tutorial has been scheduled from 1 – 3 p.m. on Tuesday, March 7, to provide industry representatives with information and instruction on the updated reporting tool. Participants will be able to submit questions throughout the web-based session, and a recording of the session will be made available on the USPOULTRY website.

To obtain information on participating in the WebEx tutorial for USPOULTRY’s updated Toxic Release Inventory Reporting Tool, please contact Paul Bredwell at pbredwell@uspoultry.org.

###

U.S. Poultry & Egg Association (USPOULTRY) is an all-feather organization representing the complete spectrum of today’s poultry industry, with a focus on progressively serving member companies through research, education, communications and technical assistance. Founded in 1947, USPOULTRY is based in Tucker, Ga.
